

## **Request for information relating to 2007 Staff Survey's Supplementary note**

The only staff surveys undertaken during 2007 were two "mini" surveys, each targeting 25% of staff.

The reason why these surveys were not proactively published externally is because we did not regard them as fully representative of FCO staff. Each survey only targeted 25% of staff and the response rate for the two surveys combined was 44%. The outcome therefore represents about 12% of staff views.
